

## I am an Example.

And I show you how to embed and render PlantUML diagrams in Markdown.

Now render this document simply by invoking `pandoc` with the correct parameters:

```
$ pandoc example.md -o example.pdf --filter pandoc-plantuml
Created directory plantuml-images
Created image plantuml-images/adc556b64f36a3ebe8682769e433687fc6b69114.png
```

The resulting file `example.pdf` shows that the embedding worked.
